

PUTTER WITH ALIGNMENT SYSTEM

ABSTRACT

A method of aligning a putter, including the steps of providing a putter having a head, a
5 heel, a toe, and a planar striking face including a removable reflecting surface for receiving and
reflecting incident light; providing a light source separate from the putter head; directing light
from the light source towards the reflecting surface such that the reflective surface is illuminated
with and reflects a portion of the light; and detecting the reflected light with a reference device.
